re : E-mark Expert opinion /changings Bolero-LT

## Expert opinion of the technical service

Dear Mr. Dr. Buch,

after review of the technical documents and a spot check, could we issue a confirmation because the implemented changings of the device Bolero-LT

- optional Accu 500 mAh (BAK) , or 1000 mAh (Varta)
- replace of the motion sensor from LIS3L02 330 to ADXL 335
- upper part of the housing changed
- GPS receiver modul canged from JP13-S (withSiRF-chip) to JP13-S-Ux (with u-Blox-Chip)

have no influence on the available e-mark approval.

A complete new test is not necessary according to our opinion, because it is only a replacement of components with the same characteristics.

The changings does have not effect on the circuit diagram or the PCB layout.

Furthermore is still valid the issued type approval of the Federal Motor Transport Authority (KBA)  
e1\*72/245\*2006/28\*5254\*00

Do not hesitate to ask me, if you have still question about this expert opinion.

Best regards,

Jens Zimmermann
