

Release notes for STEPPII GPRS Firmware

Version: 2.4.9_rc6

- Remote Update improved

Note: The existing configuration will be cleared after remote Update so long no Backup Config has been saved. Backup Config can be saved starting from the version 2.4.9_rc4. We recommend to Update this Firmware or higher remotely if the PIN of the used SIM is deactivated to be able to connect to the server by receiving the corresponding Pfal commands over SMS, to re-configure the complete device by the server. After re-configuring the unit via the Server, execute the command PFAL,CNF.Backup.

Version: 2.4.9_rc5

- NOT RELEASED!

Version: 2.4.9_rc4
